

ST-Series Shrink Tunnel

Success Story

"With other tunnels you have to change all kinds of settings".
--Jack Sloan, Sales Manager, Platinum Packaging

Problem

Operator could not see the shrink packaging process in order to make adjustments to settings. Costly waste of operator time and packaging materials.

Solution

Lantech ST-Series is the first shrink tunnel with all key elements at one location; View Window™, air circulation, temperature and conveyor speed controls.

Window View

Benefits

- No maintenance required
- Tough composite cover is durable and cool to the touch
- Easy to make great-looking packages.

A Powerful Difference

The most consistent shrink tunnel performance available...no dog ears, fish-eyes, burn-outs or wrinkles.

Operator can easily see the "shrink process" as it happens to make adjustments. This eliminates cumbersome process to go to end of tunnel and lift curtains to view the shrink process and go back to the controls to make an adjustment. Unlike traditional tunnels that blow hot-air onto the film-overwrapped packages, Lantech's tunnel uses the "soft-convection process" in an efficiently designed chamber to uniformly bathe the film bubble. No more hot/cold spots in the tunnel that create dog-ears, wrinkles and burn-outs.

The result is great-looking packages
