

SW-1000/ST-700

Success Story

"Our output is higher on two Lantech lines vs. three before, with less labor, and the quality of the wrap is noticeably better. And the machine works with less spacing between cakes, so we're getting about 50% more cakes per roll of film."

--Adam Burckle, Owner, Adam Matthews, Inc.

Problem

Extensive rework due to inconsistent or non-existent seals from existing machines. Improper shrinking of film. Replacement of Teflon tape on seal bars two or three times a day. Damaged product and unacceptable loss rates.

Solution

Two packaging lines combining SW-1000 shrink wrapping machine and ST-700 shrink tunnel produce more good product than three prior lines - with less labor and film use! Machine setup is easier, and there's no "tweaking" needed after setup.

SW-1000 Shrink Wrapper shown with Lantech ST-700 Shrink Tunnel.

Benefits

- Rework eliminated.
- Product damage stopped.
- Film use reduced.
- Labor reduced
- Packaging lines reduced.
- High-quality wrap results.

A Powerful Difference

Our shrink equipment will expand your productivity, allowing you to wrap more product with fewer packaging lines, less film, and less labor.

When you're on a first name basis with your shrink-wrap machinery serviceman, it's a sign the equipment you're using, even though relatively new, has some inherent issues. That was the conclusion at Adam Matthews Inc., a gourmet cheesecake bakery that supplies Wal-Mart, Kroger, Winn Dixie, and Meijer, among others. Package seals were inconsistent or non-existent, the film would not shrink properly, cakes got crushed by the seal bars, the trim would break and stop the machines.

Lantech's Ever-Clean™ rotary side seal and cross seal systems eliminated product damage, inconsistent seals and constant tweaking and service needed on previous machines. The tension-controlled electronic trim winder on the Lantech wrapping machines ended stoppages due to trim breaks, and allowed the customer to switch to a narrower, thinner film. The soft-convection shrink tunnels are easier to setup, adjustment-free, and produce a superior appearance.
