

Lan-ringer®

Success Story

"As far as wrapping our final product, we were packaging the doors using shrink wrap. We thought it was a good process for our operation but we are always looking for areas to improve."

--Dave Martin, Chairman and CEO, Martin Door Manufacturing, Inc.

Problem

Martin Door Manufacturing, Inc. needed to protect their high quality manufactured garage doors from dust, water, corrosion, and abrasion but shrink wrapping, while an effective barrier, was not the most effective and efficient process. Shrink wrapping machinery took up too much space, generated heat, and was too costly.

Solution

The Lan-ringer Stretch Packaging System provided the same effective protection for Martin's doors but operated in less space and generated no heat to discomfort workers. In addition, packaging costs plummeted by 75% while productivity increased.

Benefits

- Reduces packaging material costs by using inexpensive stretch film
- Reduces labor costs through automation
- User-friendly application and easy and safe removal of film
- Provides constant holding force even during vibrations, high impacts or after settling
- Provides protection from dust, water and other environmental hazards
- Provides an attractive package and allows clear visibility of product for easy identification and inspection
- Eliminates excess heat as with shrink wrap systems

A Powerful Difference

Our Lan-ringer Stretch Packaging System helped this customer save money, provide protection and improve their overall productivity.

The company switched to the Lantech Lan-ringer Stretch Packaging System. The system wraps the garage doors with a continuous overlapping layer of stretch film that contracts around the product and protects it from damage. Making the change to stretch film cut costs by 75%. And because the system uses no heat, workers are spared discomfort working near the machine. Plus, the Lan-ringer Stretch Packaging System takes up less space in the plant as well as increases productivity. The stretch packaging is easy to apply, easy for customers to remove and it's recyclable.
