

SUSTAINABILITY

Why the right machine is critical to your initiative

The right machine does the following:

- **Reduce** film usage
 - Restore and optimize existing machines
 - Replace oldest machines with newest wrapping technology
 - Move from hand wrapping to machine wrapping
- **Reduce** product damage
 - Deliver the right Containment Force for any load configuration
- **Reduce** returned goods
 - Reduce rework, and reduce replacement packaging materials
- **Reduce** landfill impact
 - Reduce material being used

SUSTAINABILITY - REDUCE

3 actionable steps to help meet your goals

1 Restore & Optimize Existing equipment

- Return stretch wrappers to full functional condition
- Optimize wrap profile for required containment force and load type
- Aim for optimal [Containment Force](#) without increasing film breaks

2 Reduce Film Usage By boosting it's performance

- Without putting product at risk or increasing returned goods
 - › Optimize wrapper settings, film and load profiles to achieve required containment
- Without increasing overall costs
 - › Select Premium or Ultra grade film able to deliver significantly higher containment force and reduce revolutions

3 Replace Old Machines With new wrapping technology

- Metered Film Delivery®
 - › Provides precision film application to each load corner overcoming the lag problems of conventional film delivery systems
 - › Delivers double the wrap force per revolution of film without crushing or twisting the load
 - › Reduces film breaks
 - › Dispenses film all the way to core

Support your Reduce strategies with

linc Lantech Intelligent
Network Connection™

Actionable Analytics, Anytime, Anywhere

- Monitor, Maintain & Improve
 - › Machine operation & performance
 - › Load quality
 - › Film performance & costs
