

### Productivity

Putting machine control back in the operators' hands.

### Lan-Logix Control

- All Legacy Lantech automatic stretch wrapping systems include the Allen-Bradley® PLC and touchscreen.
- Lan-Logix operates on state-of-the-art A-B MicroLogix PLC platform.
- Easy-to-use A-B touchscreen gives operator access.

### Wrap Pattern Control

- Lan-Logix offers three distinct wrap patterns that operator can modify instantly at the touchscreen.
- Operator can pre-set desired standard wrap patterns to meet load handling requirements such as wrap force, precise overlap control, dual turntable rotation speeds, top/bottom wraps and more.
- Lan-Logix allows access to program timers from touchscreen, eliminating the need for laptop to make modifications.

The Lan-Logix interface leads the industry to boost productivity by eliminating the need for costly software and hardware to make minor program changes. Included are multiple wrap patterns, precise wrap pattern control, password protection, and extensive efficiency data capture.

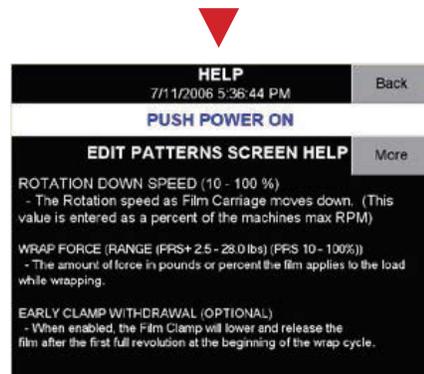

## Alarms

- Standard Lan-Logix features include visual alarm notification, alarm history, and alarm tracking and diagnostic HELP screens.
- Diagnostic HELP screens automatically direct operator to possible cause for alarm and best solution.

## Help Screens

- Operator has access to on-line HELP from every screen.
- HELP information is tailored to specific screen from which HELP is requested, eliminating time consuming searches.
- On-line HELP feature enhances effective operator training program.

## Security

- Lan-Logix and A-B PanelView Plus™ touchscreen features allow password editing or creating custom password profiles based on specific operator needs without having to access the system's stretch wrapping program.
