

S-1503

Success Story

Lantech provides water-resistant package for palletloads of bagged concrete shipped to national chain of home improvement stores.

Problem

Manufacturer requires effective unitizing method to secure bags of concrete shipped on wing pallets or inboard of pallet, and does not have budget for expensive load-lifting device.

Solution

Lantech S-1503 equipped with Mid-wrap top sheet dispenser and Pallet-Grip® protects the product from water damage and locks load to the pallet. Customer saved \$20,000 in equipment cost with this highly effective combination.

Benefits

- Optimum film yield and load containment
- User-friendly system with simplified maintenance
- Flexible design allows in-line, end-of-line or freestanding configuration

A Powerful Difference

Providing creative solutions to help you reduce damage and increase productivity

Lantech S-1503 automatic conveyorized straddle stretch wrapper easily handles the volume of bagged product from the two new production lines to meet increased customer demand. Maintenance cost is lower as the abrasive cement residue falls through the conveyor rollers instead of collecting on a turntable system. The very heavy loads of concrete are locked to the shipping pallet with an ultra-strong film cable produced by the Pallet-Grip® load locking system. Pallet-Grip® eliminated the installation of an expensive \$20,000 load lift system to place the film under the wings of the shipping pallet. A water-resistant poly sheet is automatically placed on the top of the load midway during the wrapping cycle to provide full 5-sided protection of the bagged concrete.
